Power And Water In The Middle East: The Hidden Politics Of The Palestinian-Israeli Water Conflict

Synopsis

Power and Water in the Middle East provides a powerful new perspective on the Palestinian-Israeli water conflict. Adopting a new approach to understanding water conflict - hydro-hegemony - the author shows the conflict to be much more deeply entrenched than previously thought and reveals how existing tactics to control water are leading away from peace and towards continued domination and a squandering of this vital resource. Existing approaches tend to play down the negative effects of non-violent water conflict, and what is presented as co-operation between countries often hides an underlying state of conflict between them. The new analytical framework of hydro-hegemony exposes the hidden dynamics of water conflict around the world and yields critical insights into the Middle East water problem. This important work will interest researchers, professionals, and policy makers involved with the politics of the Middle East and with water conflict more generally.

Book Information

Paperback: 240 pages

Publisher: I.B.Tauris (December 15, 2011)

Language: English

ISBN-10: 184885997X

ISBN-13: 978-1848859975

Product Dimensions: 6.2 x 0.7 x 9.7 inches

Customer Reviews

The waters of the Jordan Basin attract a great deal of analysis as so much is expected of them. In 1948 there were about three million people living in the Jordan Basin. By the early twenty-first century there were about eighteen millions. It is remarkable that water wars have not been a constant and high profile feature of the international relations of this spectacularly conflictual region. There has been armed conflict over water. In the 1962-1964 period Syrian artillery stopped Israel from constructing its water carrier from the chosen site on the upper Jordan. In the same period Israeli artillery and jets stopped Syria from constructing a diversion from the Banias tributary

in Golan to the Yarmuk. Since then there has been no inter-state armed conflict over water. Not in the Jordan Basin. Not in the Middle East. Not anywhere in the world. States do not go to war over water. The absence of armed conflict does not, however, mean that there is no conflict. This message is the main and very influential insight of Mark Zeitoun's excellent study. The basin has enough water to underpin water and food self-sufficiency for only about three millions. By the mid-1960s the population of the basin had reached about eight millions. This inadequacy of water resources water has not proved to be a high politics issue despite its elemental role for society and economies. Other challenges rank much higher for the political leaders of the basin. The reason the tension over water has intensified is because all five economies in the basin have experienced periods of mass immigration - sometimes wanted and planned. But more usually it was the result of political dislocations within the basin.
